

When we speak of cities, the attention of researchers, the media, and institutions is traditionally focused on large metropolises. Yet in reality, **half the urban population of the world lives in hundreds of small and medium-sized cities** (Moriconi-Ebrard, 1994).

These agglomerations play a **key role in urban growth**. They have **heterogeneous dynamics and profiles that diverge from what is observed in metro cities**. Therefore, studies of the base of the urban hierarchy enrich and deepen the urban concept as a whole.

Defining these agglomerations also requires the testing of categories of space which go beyond a simple, and increasingly problematic, urban-rural dichotomy. What criteria should define the threshold between these spaces? Can we speak of an “in-between” territory? In terms of process, **small cities highlight the different stages of urban growth: genesis, development, mutation, and regression**.

In the context of fieldwork, researchers’ observations are faced with the **arbitrary official definition of urban areas**, which differ from one country to the next. This contributes to the **fuzziness of objective boundaries between “small towns” and villages**. The change of the status of small agglomerations can lead to modifications in fiscal, environmental and urban rules. **Access to urban status is a major issue for the development of a locality and territory** (Giraut, 2005). What is the impact of urban policies on such towns? Is it enough to proclaim that a locality is “urban”? Are there specific governance issues that come with the small and medium town? Are these issues at the basis of original proposals concerning country planning?

In a global marketplace, where agglomeration economies are prioritized, metro cities seem to be the only competitive spaces. In reality however, small towns are often **spaces of innovation capable of taking their own place in wider global networks** (Bairoch, 1984). What are the major assets of such towns compared with larger metro cities? How do they face the major spatial issues of a society: mobility, land access and competition, exploitation of local resources, procurement, and environmental protection? These issues are dependent on forms of spatial organisation, which are themselves the result of intense processes of concentration and dispersion. Do clusters, urban corridors and dispersed settlements represent specific organisational types of such intermediary, “in-between” spaces?

Themes

- Comparative approach: India, Europe, Africa, Latin America...
- Small towns, networks and mobility
- Small town and land issues
- Urban systems and hierarchies
- Emerging towns: genesis and history
- Role of politics, role of spontaneous urbanisation
- Small town economy
- Small towns and hierarchies
- Small towns and sustainable development

Audience

- Public: researchers, professors, students
- Fields: geography, demography, history, spatial economy, sociology, anthropology, law, regional planning, urbanism
- Meeting between researchers and stakeholders (international institutions, development agencies, firms)

Highlights

Workshops-Conferences-Round table-Gala

Conference website

<http://fronturb2013.sciencesconf.org>

Call for papers

- Proposals for papers should include the following:
 - Title of the paper
 - Abstract (between 500 and 800 words)
 - Name and details of the author(s)
- Proposals should be submitted on the conference website:
<http://fronturb2013.sciencesconf.org/user/submit?lang=en>

Agenda

- Final date for abstract submission: 11th October 2013
- Paper confirmation: 15th November 2013
- Final date for sending full paper: 20th December 2013

Place and date

Université d'Avignon et des pays de Vaucluse : www.univ-avignon.fr
From 22 to 24 January 2014

Contacts

Organisation: julien.bordagi@netcourrier.com - Scientific coordinator: chatelcathy@yahoo.fr
